

Engine Cylinder Liner

Cylinder liners are available in dry and wet configurations. Wet cylinder liners make direct contact with engine coolant, improving engine cooling, miniaturization, and weight reduction.

Product Overview

Engine Cylinder Liner Overview

This precision-engineered cylinder liner is designed for internal combustion engines, providing a critical surface for piston movement. Manufactured to meet stringent quality standards, the component features a durable construction with a honed internal surface to minimize friction and wear. It is built to withstand high temperatures and pressures, ensuring optimal engine performance, longevity, and reliable operation for engine rebuilds and maintenance.

Technical Specifications

Design Features

- Honed internal surface for piston ring sealing
- Reduced friction design
- Circumferential grooves for heat dissipation
- Enhanced structural integrity

Model Identification

K4100, ZH4100, ZH4103

Performance Metrics

Key Performance Attributes

1 High

Wear Resistance

1 Optimized

Heat Dissipation
