

# Engine Driven Water Pump for Irrigation

This portable engine-driven water pump is designed for irrigation and water transfer applications. The unit features a compact, air-cooled engine with a recoil starter, coupled to a centrifugal pump and mounted on a sturdy base frame.

## Overview

### High-Efficiency Irrigation Solution

This portable, engine-driven water pump is engineered for reliable performance in agricultural irrigation and water transfer applications. Designed with a sturdy base frame for enhanced stability, it features a compact, air-cooled engine equipped with a recoil starter for easy operation. It is an ideal solution for farmers and agricultural professionals requiring efficient water management, drainage, and irrigation capabilities.

## Performance

### Engine Power

**6.5 HP**

Engine Horsepower

## Technical Specifications

Cooling System	Air-cooled
Starting Mechanism	Recoil Starter
Pump Type	Centrifugal

## Features

Design Features	Portable, Sturdy Base Frame, Integrated Muffler, Air-Cooled Engine
-----------------	--

## Applications

### Typical Applications

- Agricultural Irrigation
- Water Transfer
- Field Drainage
- General Water Management
