

Engine Driven Welder

This engine driven welder is designed for various welding applications. Its compact design and portability make it suitable for both on-site and workshop use.

Overview

Versatile Engine-Driven Welding Solution

The WG6500MP is a robust, engine-driven welder engineered for demanding work environments. Designed for both on-site and workshop applications, this unit combines welding capabilities with electrical power generation. It features a protective frame for enhanced durability and a user-friendly control panel for precise operation.

Technical Specifications

Model Number	WG6500MP
Functionality	Welding, Power Generation
Voltage Rating	220 V

Design & Build

Design Features

- Protective frame for durability
- Compact and portable design
- Integrated control panel
- Multiple power outlets
