

Engine Filtration Component

This is a high-performance fuel filter designed for efficient removal of contaminants from fuel, ensuring optimal engine performance and longevity. It features a robust construction with a perforated metal end cap and a durable housing.

Product Overview

High-Performance Filtration Solutions

These engine filtration components are engineered to meet rigorous quality standards, ensuring optimal engine performance and longevity. Designed with advanced filtration media and robust construction, they effectively capture contaminants such as dust, pollen, and particulates. The range covers a broad spectrum of European, American, Japanese, and Korean vehicle models, providing reliable protection for modern engine systems.

Quality & Compliance

Certifications

ISO 9001, TS 16949

Product Compatibility

Vehicle Compatibility

- European Models
- American Models
- Japanese Models
- Korean Models
