Product Overview

Engine Piston Ring Set

These high-quality piston rings are engineered to provide a tight seal within internal combustion engines, effectively reducing blow-by and maximizing compression. Designed for durability and optimal engine performance, they offer excellent wear resistance and help maintain oil control by scraping excess oil from cylinder walls. This set is suitable for various engine types, ensuring efficient heat transfer from the piston to the cylinder for longevity.

Technical Specifications

Quality Certifications

ISO 9002 • QS 9000 • ISO/TS 16949

Engine Compatibility

- Micro-vehicles
- Motorcycles

Material Composition

Martensitic Stainless Steel, Nitrided Steel, Compound Steel

Bore Size

62 mm

Model Reference

DA462

Key Features

Performance Highlights

100 Million Pieces

Annual Production Capacity
