Product Overview

High-Performance Engine Water Pump Kit

This engine water pump kit is engineered for reliable coolant circulation and effective temperature regulation in heavy-duty engines. Designed to meet or exceed OEM specifications, this kit is a critical component for maintaining optimal engine performance and preventing overheating. It is specifically compatible with 4BTA3.9-C100 and 6BTA5.9-C174 engine models, making it an essential replacement part for construction machinery and excavators.

Technical Details

Part Number	3286278
Compatible Engine Models	4BTA3.9-C100, 6BTA5.9-C174

Applications

Suitable Equipment

- Construction Machinery
- Excavators
- Heavy-duty Equipment

Quality Assurance

Key Features

OEM Specification Compliance • Overheating Prevention • Durable Construction
