

Engraving and Etching Machine

This machine is designed for engraving and etching designs on different materials. It employs precise techniques to produce intricate patterns and markings.

Overview

Professional Fastening Solution

This blind rivet, commonly referred to as a pop rivet, is an essential fastener designed for joining materials where access is limited to only one side of the joint. The mechanism utilizes a two-part assembly consisting of a hollow rivet body and a mandrel. When installed with a dedicated rivet tool, the mandrel is pulled to expand the rivet body, creating a secure and permanent connection before the mandrel breaks off.

Technical Specifications

Components

- Rivet body (hollow cylinder)
- Mandrel (pin)

Fastener Type	Blind Rivet (Pop Rivet)
Installation Method	Single-sided access required
