

Engraving and Etching Machine

This machine is designed for engraving and etching various materials. It allows for precise creation of detailed designs on surfaces.

Overview

Versatile Material Handling Solution

This manual hydraulic stacker is designed for efficient lifting and transportation of loads within warehouses, factories, and industrial settings. Built with a robust steel frame, it ensures long-term durability and stability during operation. The hydraulic system provides smooth, controlled lifting, easily operated via a manual hand pump, making it an ideal choice for environments where powered equipment is not required.

Technical Specifications

Frame Material	Robust Steel
Operation Method	Manual Hand Pump

Features

Key Features

- Adjustable forks for various pallet sizes
- Foot brake for secure positioning
- Hydraulic lift system
- Robust steel frame construction

Applications

Primary Applications	Warehouse Logistics, Factory Material Handling, Truck Loading/Unloading, Pallet Stacking
