

Enterprise Network Communication Device

This network communication device is designed for reliable data transmission and management. It features a clear display for monitoring network status, multiple function indicators for easy troubleshooting, and secure access control.

Product Overview

Enterprise Network Communication Device

This high-performance network communication device is engineered for reliable data transmission and robust network management within enterprise-level infrastructures. It features a clear, integrated display for real-time monitoring of network status, ensuring administrators have immediate visibility into system health. Equipped with intuitive function indicators and secure access control mechanisms, this terminal device simplifies troubleshooting and enhances operational security.

Technical Specifications

Model Number	GFD1550-A
Device Type	Fiber Optic Communication Terminal
Key Features	Network Status Monitoring, Secure Access Control, Troubleshooting Indicators

Operational Interface

Interface Controls

- Function Indicators
- Reset Button
- Monitor Display
- Power Indicator
