Overview

European Standard Pallet System

These pallets are manufactured under strict quality procedures, ensuring consistent performance for logistics and storage operations. Designed as part of an open exchange pool, they facilitate seamless material flow across international borders. The system provides enhanced operational safety, stable storage, and secure transport for diverse industrial goods.

Compliance & Standards

Certifications & Compliance

EPAL, UIC CODE 435-3, Quality Controlled

Key Benefits

Operational Advantages

- Safer transport for goods
- Stable storage capabilities
- Optimum operational safety
- Standardized compatibility for automated systems

Technical Details

Robust metal pallet designed for heavy-duty industrial use and efficient storage.

Construction

Stackable • Collapsible • Steel Mesh • Galvanized Finish

Design Metrics

435 standard

UIC Code

Usage & Application

Suitable Environments

- Warehousing
- Logistics
- Manufacturing
- International Transport
