

Evacuated Tube Solar Collector

This high-efficiency solar thermal collector uses evacuated tube technology. It is designed for domestic hot water and space heating, with durable construction and easy installation.

Overview

Advanced Solar Thermal Technology

This high-efficiency solar thermal collector utilizes advanced evacuated tube technology to ensure superior heat absorption with minimal heat loss. Designed for versatility, it is an ideal solution for both domestic hot water systems and space heating applications. Its durable construction is engineered to withstand various climate conditions, providing reliable, long-term performance and ease of installation for professional setups.

Performance

Key Performance Metrics

95 %

Absorption Efficiency

5 W/m²K

Heat Loss Coefficient

Technical Specifications

Installation Features

- Easy installation design
- Durable weather-resistant construction
- Optimized for diverse climate conditions

Collector Type	Evacuated Tube
Primary Applications	Domestic Hot Water, Space Heating, Residential, Commercial
