

Evacuated Tube Solar Water Heater

This solar water heater uses evacuated tubes to efficiently heat water using solar energy. It is suitable for both residential and commercial applications, providing an eco-friendly hot water solution.

Product Overview

High-Efficiency Solar Heating

This evacuated tube solar water heater is designed for robust performance in both residential and commercial hot water production. By utilizing advanced vacuum tube technology to absorb solar radiation, the system converts sunlight into thermal energy with high efficiency. It provides an eco-friendly and cost-effective alternative to traditional water heating methods, featuring a durable cylindrical storage tank and a stable support frame.

Technical Features

Key Components

- Evacuated solar collector tubes
- Cylindrical hot water storage tank
- Reinforced support frame

Energy Source

Solar Energy

Suitable Applications

Residential, Commercial
