

Evacuated Tube Solar Water Heater System

This system efficiently heats water using solar energy. It is designed with a high-capacity storage tank and multiple evacuated tubes to maximize solar absorption.

Product Overview

High-Efficiency Solar Heating

This evacuated tube solar water heater system provides a sustainable and cost-effective solution for both residential and commercial water heating needs. By utilizing advanced solar absorption technology, the system maximizes thermal efficiency even in varying weather conditions. Its durable construction ensures long-lasting performance, offering an environmentally friendly alternative to traditional water heating methods.

Technical Specifications

Sustainability

Environmentally friendly • Energy efficient

System Technology	Evacuated Tube Solar
Suitable Applications	Residential, Commercial
