

Evaporative Air Cooler

The evaporative air cooler is an efficient and eco-friendly cooling solution. It utilizes the natural process of water evaporation to lower air temperature, providing a refreshing and comfortable environment.

Overview

Efficient Cooling Solution

This evaporative air cooler offers an eco-friendly and efficient way to lower air temperatures by utilizing the natural process of water evaporation. Designed for versatility, it is suitable for both residential and commercial applications. The unit features a multi-layered cooling pad for enhanced performance, adjustable fan speeds, and a large water tank for extended operation.

Key Features

Cooling Method	Water evaporation
Design	Portable
Control Panel	User-friendly

Compliance & Standards

Certifications	CE, IEC
