

Evaporative Air Cooler for Commercial Spaces

This evaporative air cooler is designed for industrial and commercial applications. It provides effective cooling through water evaporation, reducing ambient temperature while consuming less energy than traditional air conditioning systems.

Overview

High-Efficiency Cooling Solution

This high-efficiency evaporative air cooler is engineered for demanding industrial and commercial environments, including factories, schools, and supermarkets. By leveraging advanced water evaporation technology, the unit provides effective cooling while significantly reducing energy consumption compared to traditional air conditioning systems. Its durable construction and adjustable fan speeds ensure reliable, customized performance for large indoor spaces seeking cost-effective and environmentally friendly climate control.

Key Features

Performance Benefits

- Energy-efficient cooling technology
- Durable industrial-grade construction
- Adjustable fan speed settings
- High-capacity water tank

Suitable Environments

Factories, Schools, Supermarkets, Large Indoor Spaces

Cooling Method

Water evaporation
