

# Evaporative Air Cooler with Louvered Air-flow

This evaporative air cooler delivers efficient and localized cooling. The unit features a louvered front panel for directing airflow and a durable housing for longevity.

## Product Overview

### Efficient Cooling Solution

This evaporative air cooler is designed for efficient and localized cooling in various indoor environments. By utilizing the natural process of water evaporation, it lowers ambient air temperatures while maintaining high energy efficiency. The unit features a durable housing and a louvered front panel, allowing for precise control over the direction of the airflow.

## Design & Build

Airflow Control	Louvered front panel
Construction	Durable housing, Indoor use

## Operational Details

Efficiency	Energy Efficient
Cooling Technology	Evaporative cooling
