

Evaporative Air Cooler with Remote Control

This evaporative air cooler provides cooling through water evaporation. It features a multi-speed fan, adjustable louvers for directional airflow and a remote control for convenient operation.

Product Overview

Efficient Cooling Solution

This evaporative air cooler offers a sophisticated cooling experience through advanced water filtration and air purification. Equipped with wide-angle three-dimensional airflow, it ensures even distribution throughout your space. Designed for user convenience, the unit includes remote control operation, auto-dry functionality, and protective features like automatic power-off.

Key Features

Core Functionalities

- Wide-angle three-dimensional airflow
- Five-stage water filtration and air purification
- Automatic power-off protection
- Auto-dry function with delay
- Remote control operation

System Design
