

Evaporative Air Cooler with Remote Control

This evaporative air cooler cools the air by passing it over a water-saturated pad. It features multiple fan speeds, oscillation, a refillable water tank, and caster wheels for portability, all controllable via remote.

Overview

Efficient Evaporative Cooling

The FL-5H evaporative air cooler provides an efficient and cost-effective cooling solution suitable for home or office environments. By utilizing advanced evaporative technology, it cools the air by passing it over a water-saturated pad, making it an ideal, refreshing alternative to traditional air conditioning in dry climates. The unit includes convenient features such as a remote control, oscillation for wider distribution, and easy-to-move caster wheels.

Key Features

Core Features

- Remote control operation
- Multiple fan speeds
- Oscillation function for wide air distribution
- Refillable water tank
- Caster wheels for portability

Technology

Evaporative Cooling • Water-saturated pad system

Performance

Ideal Environment

Dry Climates, Home, Office
