Product Overview

V51 Series Excavator Bucket Teeth

The V51 series excavator bucket teeth are precision-engineered for heavy-duty construction and earthmoving tasks. Manufactured from high-quality hardened alloy steel, these components offer exceptional wear resistance and durability in abrasive or rocky soil conditions. Designed for optimal penetration and breakout force, this series helps increase operational productivity while minimizing machine downtime.

Technical Specifications

Material Features

- Hardened alloy steel construction
- High wear resistance
- Impact resistant design

Compatible Machine Models	EX470, VY, VYH, RC
---------------------------	--------------------

Individual Weight	15.3 KG
-------------------	---------

Product Variants

Available Tooth Configurations

Part Type	Application
V51SHV	EX470 compatibility
V51TL	VY/VYH compatibility
V51RC	General excavation
