

Excavator Bucket Tooth

This is a cast steel bucket tooth designed for excavators and other construction machinery. It is engineered for efficient soil penetration and optimal bucket fill.

ADDITIONAL IMAGES

Product Overview

High-Performance Excavator Bucket Tooth

This cast steel bucket tooth is engineered for excavators and various construction machinery, providing exceptional durability in demanding digging environments. Designed for high wear resistance, it ensures efficient soil penetration and optimal bucket filling to enhance operational productivity. The robust construction and secure rear cavity attachment make it a reliable choice for heavy-duty construction and mining applications.

Technical Specifications

Weight Range

0.5 kg

Minimum Weight

100 kg

Maximum Weight

Design Features

- Forked design
- Central mounting hole
- High wear resistance
- Secure rear cavity attachment

Compatible Machinery

Excavator, Engineer Truck

Material

Cast Steel
