

Excavator Cutting Edge Replacement

This cutting edge is suitable for use in construction machinery. It is available in boron steel or manganese steel with multiple color and specification options.

Overview

High-Performance Excavator Cutting Edge

This replacement cutting edge is engineered for demanding construction environments, ensuring optimal performance and efficient material handling. Designed specifically for heavy machinery, it offers robust construction to extend service life and minimize downtime. Professional buyers can choose from various materials and specifications to meet specific project requirements.

Technical Specifications

Key Features

- High-durability construction
- Precise dimensional engineering
- Optimized for longevity
- Efficient material handling

Part Number	100-6666
Available Materials	Boron Steel (30MnB), Manganese Steel (16Mn)

Customization

Customization Options

Multiple Colors • Various Specifications

Application

Primary Application	Construction Machinery
