

Excavator Hydraulic System Pressure Sensor

This pressure sensor is designed for use in excavators and other construction machinery. It monitors and regulates pressure within hydraulic systems, ensuring optimal performance and preventing damage.

Product Overview

Hydraulic System Pressure Sensor

This high-precision pressure sensor is engineered for heavy-duty construction machinery, specifically designed for C9 engine hydraulic systems. It provides accurate, real-time monitoring of hydraulic pressure to ensure optimal equipment performance and prevent critical system damage. Built with a robust brass housing, this component is designed to withstand the demanding conditions of industrial environments.

Technical Specifications

Part Number	161-1705
Engine Compatibility	C9 Engine
Body Material	Brass
Primary Function	Hydraulic system pressure monitoring and regulation
