

Exhaust Manifold for Auto Engine

Exhaust manifold designed for use in auto engines. It features a tubular construction with flanges for connection to the engine and exhaust system.

Product Overview

High-Performance Exhaust Manifold

This exhaust manifold is engineered for automotive engines to optimize exhaust gas flow. Featuring a robust tubular construction, it is designed to efficiently collect gases from the engine cylinders and direct them toward the exhaust system. The unit includes integrated mounting brackets to ensure a secure and stable attachment to the engine block.

Technical Specifications

Primary Application

Auto Engine

Construction Style

Tubular

Mounting Features

Integrated Brackets, Flange Connection
