

Extendable Bypass Loppers with Steel Blades

These bypass loppers are designed for efficient pruning. They feature high-quality steel blades for clean cuts and lightweight extendable aluminum handles for increased reach.

Product Overview

Professional Pruning Solution

These extendable bypass loppers are engineered for professional-grade pruning of branches and stems. Featuring high-quality steel blades, they ensure clean, precise cuts that promote healthy plant growth. The lightweight aluminum handles are extendable to provide increased reach while minimizing user strain, making them an essential tool for gardening, landscaping, and tree maintenance.

Technical Specifications

Blade Material	High-quality Steel
