

Extrusion Injection Molding Machine

This extrusion injection molding machine combines extrusion and injection molding processes. It is designed for manufacturing plastic components with precision and efficiency.

ADDITIONAL IMAGES

Overview

High-Efficiency Extrusion Injection Molding

This advanced machinery integrates extrusion and injection molding processes to deliver high-quality, durable plastic components. Engineered for high-volume manufacturing, the system offers precise material handling, robust clamping force, and significant energy efficiency. It is an ideal solution for producing large-scale industrial items, including pallets, bins, containers, and complex pipe fittings.

Certifications

Industry Certifications

CE, TÜV, ISO 9001

Technical Specifications

Available Models

- TH2800/N2
- TH2880/s2

Applications

Primary Industries

- Automotive Parts
- Household Appliances
- Urban & Rural Construction
- Oil Pipelines
- Logistics & Warehousing

Common Products

- Industrial Pallets
- Storage Bins
- Septic Tanks
- Large Containers
- Pipe Fittings
