

F Type Grinding Wheel

This grinding wheel is designed for surface preparation, material removal, and finishing. It features abrasive grains bonded to a durable matrix for consistent performance on concrete, stone, and masonry.

Product Overview

Professional Surface Preparation

The F Type Grinding Wheel is a specialized abrasive tool engineered for demanding surface preparation, material removal, and finishing applications. Designed for heavy-duty use in construction and industrial settings, it utilizes high-quality abrasive grains to ensure consistent performance on concrete, stone, and masonry. Its unique F-type segment configuration optimizes dust removal while providing an aggressive grinding action for maximum efficiency.

Technical Details

Primary Applications

- Surface preparation
- Material removal
- Finishing applications

Compatible Materials

Concrete, Stone, Masonry

Segment Configuration

F-type

Performance Features

Performance Benefits

1

Aggressive Grinding Action
