

Fabric Steam Shrinkage Tester

This machine is used for steaming shrinkage testing of fabric. It can also perform reproducibility measurement for shrinkage components produced during fabric shrinkage.

Product Overview

Precision Steam Shrinkage Analysis

This Steam Shrinkage Test Machine is engineered for the accurate determination of material shrinkage properties under controlled steam conditions. Featuring a robust, insulated chamber with precise temperature and humidity regulation, it ensures consistent and repeatable testing results. It is an essential tool for quality control and material development across various industries.

Technical Features

Chamber Design	Robust, insulated chamber
Interface	User-friendly interface for parameter setting and monitoring

Applications

Suitable Materials

- Textiles
- Plastics
- Rubber

Compliance

Certifications & Standards	CE, ISO 9001:2000, SGS
