

Fan Coil Unit Fan

These fans are designed for fan coil units (FCU). They provide low noise and high strength operation, making them suitable components for FCU systems.

Product Overview

High-Efficiency Fan Coil Unit Components

These specialized fans for Fan Coil Units (FCU) are engineered to provide a balance of cost-efficiency and robust performance. Designed for HVAC systems, they feature a high-strength construction that ensures durability while maintaining low noise levels during operation. These units serve as critical components for effective air circulation and ventilation in various professional applications.

Technical Specifications

Material	Galvanized steel
Key Features	Low Cost, High Strength, Low Noise
Primary Application	HVAC Fan Coil Units

Design Characteristics

Design Type	Cylindrical housing with open inlets and outlets
-------------	--
