

Fan Finger Guard

This plastic finger guard protects users from fan blades and rotating machinery. It features a circular grid pattern, providing effective coverage and adequate airflow.

Product Overview

Safety and Airflow Optimization

This plastic finger guard is engineered to provide essential protection against fan blades and rotating machinery components. Featuring a circular and radial grid pattern with a central hub, it ensures maximum safety without compromising airflow efficiency. Designed for durability and ease of use, it is an ideal solution for cooling fans in electronic equipment and industrial machinery.

Physical Characteristics

Material	Durable Plastic
Design Features	Circular Grid, Radial Pattern, Central Hub

Installation

Mounting Method	Corner Mounting Holes
-----------------	-----------------------

Applications

Recommended Applications

- Cooling fans
- Electronic equipment
- Industrial machinery
