

Fiberglass Industrial Exhaust Fan

This industrial fiberglass exhaust fan is designed for efficient ventilation and air extraction. It features a durable FRP (Fiberglass Reinforced Polymer) construction for corrosion resistance and long-lasting performance.

ADDITIONAL IMAGES

Overview

High-Performance Industrial Ventilation

This industrial fiberglass exhaust fan is engineered for heavy-duty ventilation requirements in demanding environments, including textile workshops, greenhouses, and large-scale agricultural facilities. Constructed with durable Fiberglass Reinforced Polymer (FRP), the unit offers exceptional corrosion resistance and longevity. It features a high-efficiency motor and a 6-paddle propeller design, ensuring reliable, high-volume air movement with minimal maintenance.

Key Features

Key Features

- Durable FRP (Fiberglass Reinforced Polymer) construction
- 6-paddle propeller blade design
- Totally enclosed, high-efficiency maintenance-free motor
- Heavy-duty casting pulley and hub
- Shutter with PVC extrusion frame and stainless steel reinforced corners
- 100% quality control motor testing

Technical Specifications

Model Performance Comparison

Item No.	Airflow (CMH)	Power (kW)	Max Pressure (Pa)	Noise (db)
JLF-180	18000	1.1	180	d68
JLF-220	22000	1.5	200	d70
JLF-250	25000	2.2	330	d75
JLF-300	30000	3	350	d78

Power Supply | 380V/220V

Applications

Suitable Applications

Textile Workshops, Greenhouses, Livestock Farms, Food Processing, Warehousing, Commercial Kitchens
