

# Fighter Aircraft

This single-seat, twin-engine jet fighter is engineered for air defense. It features a swept-wing design and nose-mounted air intake, and is typically armed with cannons and air-to-air missiles.

## Overview

### High-Performance Jet Fighter

This single-seat, twin-engine jet fighter is designed for versatile air defense and ground attack operations. Featuring a robust swept-wing architecture and a classic nose-mounted air intake, it offers reliable performance for tactical engagements. Its proven design history and operational flexibility make it a notable asset for diverse aviation requirements.

## Technical Specifications

Crew Capacity	1 person
Number of Engines	2
Wing Configuration	Swept-wing

## Capabilities

### Standard Armament

- Cannons
- Air-to-air missiles

### Key Metrics

**2 engines**
