

Film Blowing Machine

This film blowing machine extrudes molten plastic into a thin film. It utilizes a cooling system to solidify the film and a winding mechanism to collect the finished product.

Overview

Industrial Film Blowing Solution

This high-performance film blowing machine is engineered for efficient plastic film production, featuring a robust multi-level structure. It integrates a precise material feeding hopper, advanced extrusion die, and an effective air-based cooling system to ensure consistent film quality. Designed for professional industrial environments, the unit includes intuitive control panels for streamlined operation and monitoring of the extrusion process.

Technical Specifications

Key Components

- Material feeding hopper
- Extrusion die
- Air-based cooling system
- Winding mechanism
- Electronic control panel

Design & Construction

Machine Type

Extrusion Machinery • Film Production

Design Features

Multi-level structure, Industrial design, Blue and white color scheme, Integrated access platforms
