

Film Blowing Machine for Plastic Film Production

This film blowing machine is designed for the production of plastic films. It features a multi-stage process including material feeding, extrusion, film forming, cooling, and winding.

Overview

High-Efficiency Film Blowing Solution

This industrial film blowing machine is engineered for the reliable production of plastic films. It integrates a comprehensive multi-stage process, including precise material feeding, extrusion, film forming, cooling, and winding. Designed for continuous operation, this system features a high tower structure to ensure optimal cooling and shaping, making it a robust choice for efficient film manufacturing.

Technical Capabilities

Production Process

- Material Feeding
- Extrusion
- Film Forming
- Cooling
- Winding

Key System Components

Control Panel • Feeding System • Winding Unit • Cooling Tower

Operational Features

Continuous Operation, High Tower Cooling, Parameter Control, Automated Winding
