

Film Extrusion Die Head for PP PS PE CPP CPE Films

This die head features a hanger-style streamlined flow channel design. It can produce single-layer and multi-layer coextrusion lamination cast films when used with an extruder and compound distributor.

Product Overview

High-Precision Film Extrusion Solution

This high-precision film extrusion die head is engineered for the production of PP, PS, PE, CPP, and CPE films. It features an optimized flow channel design for uniform material distribution and advanced thermal control for consistent film quality. Designed for demanding industrial environments, the robust construction ensures long-term reliability and precise thickness control through adjustable die lips.

Technical Specifications

Core Features

- Adjustable die lips for precise thickness control
- Optimized flow channel for uniform melt distribution
- Advanced thermal control system
- Robust, industrial-grade construction
- Easy maintenance design

Compatible Materials

PP, PS, PE, CPP, CPE
