

Finger Vein Recognition Access Control System

This system uses finger vein recognition technology for secure access control. It also includes fingerprint and card reader options for versatile authentication.

Overview

Advanced Biometric Security

This Finger Vein Recognition Access Control System provides a highly secure and reliable solution for managing facility entry. By utilizing advanced vein scanning technology alongside traditional fingerprint and card reading capabilities, it ensures robust authentication for sensitive environments. The integrated display offers real-time status updates, making it an intuitive choice for professional access management.

Technical Specifications

Key Features

- Real-time time and date display
- Integrated card reader module
- High-security biometric authentication
- User-friendly interface

Interface Display

Time Display • Date Display • Status Indicators

Authentication Methods

Finger Vein Recognition, Fingerprint Scanning, Card Reader
