

Fire Damper Roll Forming Machine

The fire damper roll forming machine is designed for the efficient production of fire dampers. It uses rollers to shape metal sheets into precise fire damper profiles.

Product Overview

Automated Fire Damper Production

This fully automatic fire valve production line is engineered specifically for fire control and smoke exhaust manufacturers. Featuring a modular design with PLC control and touch screen operation, it streamlines production by eliminating the need for welding or spray painting. This solution significantly reduces labor costs while maximizing output efficiency for mass production environments.

Technical Specifications

Line Components

- Body roll forming machine
- Blade roll forming machine
- Support strip roll forming machine
- Riveting platform
- Moulds

Control Interface

PLC Control, Touch Screen Operation, Fully Automatic

Operational Benefits

Key Operational Advantages

1 None

Welding Required

1 None

Spray Painting Required

Operational Features

Modular Design • Easy to Learn • Labor Saving • Cost Efficient
