

# Fire Hose Couplings and Adapters

Designed for connecting hoses, nozzles, and other firefighting equipment. These fittings are made from durable materials such as brass, aluminum, and stainless steel to withstand high pressure and harsh environments.

## ADDITIONAL IMAGES

## Product Overview

### Professional Grade Fire Hose Connections

These fire hose couplings and adapters are essential components engineered for creating secure, leak-proof connections in firefighting systems. Constructed from durable materials like brass, aluminum, and stainless steel, they are designed to withstand high pressure and harsh environmental conditions. The range includes male and female adapters, as well as reducers, ensuring compatibility across various hose diameters and connection standards for reliable water delivery.

## Technical Specifications

### Connection Types

- Male Adapters
- Female Adapters
- Reducers
- Quick-connect mechanisms

### Material Options

Brass, Aluminum, Stainless Steel

## Performance

### Key Performance Attributes

**1 High**

Pressure Resistance

**1 Yes**

Leak-proof Design

## Compatibility

### Versatility and Use Cases

Component Type	Primary Function
Couplings	Connect hoses to hydrants/equipment
Adapters	Bridge different thread types
Reducers	Adjust for different hose diameters
