

Firefighting Helicopter Water Tank System

This is a helicopter-mounted water tank system used for aerial firefighting. The system allows for the rapid deployment of water to suppress wildfires.

Product Overview

Aerial Firefighting Capability

This specialized water tank system is engineered for integration with rotary-wing aircraft to provide rapid aerial firefighting support. Designed for high-stakes operations, it enables helicopters to effectively deploy large volumes of water for wildfire suppression and emergency response. This equipment enhances the versatility of civil aviation assets, ensuring critical support for public safety and disaster management missions.

Operational Capabilities

Operational Environment

- Wildfire suppression
- Near-water operations
- Emergency response support

Primary Application

Aerial wildfire suppression and water delivery

Deployment Method

Underslung fuselage-mounted tank system

Compatible Aircraft

Civil Aviation Helicopters, Public Safety Aircraft
