Overview

High-Performance Soil Preparation

This fully-suspended disc plow is engineered for efficient soil cultivation, featuring rotary motion discs that prevent clogging and grass winding. Designed for versatility, it excels in challenging conditions including land with weeds, crop stems, and frictional soil containing bricks. The implement provides adjustable plowing angles to ensure optimal soil turning and furrow creation for modern agricultural needs.

Technical Specifications

Performance Metrics

Model	Working Width (mm)	Discs	Weight (kg)	Required Power (hp)
1LY-2	600	2	350	40
1LY-3	900	3	400	60
1LY-4	1200	4	470	80
1LY-5	1500	5	560	120

Linkage Type Three-point suspension II type

Working Depth 275 mm

Key Features

Operational Benefits

- Anti-clogging design prevents grass winding
- Effective cutting of crop stalks
- Adjustable disc angle for custom soil penetration
- Fully-suspended system for four-wheel tractors
