

Five-Axis Servo Robot Arm

This CNC full servo robot is a five-axis manipulator designed for industrial precision and automation. Its robust construction and advanced servo control enable accurate and repeatable movements for tasks like material handling, assembly, and machining.

Overview

Precision Five-Axis Manipulator

This CNC full servo robot is engineered for high-precision industrial automation tasks. Featuring a robust five-axis design, it delivers accurate and repeatable movements essential for demanding applications. It is an ideal solution for material handling, assembly, and machining workflows requiring reliable performance.

Technical Specifications

Series

TFAW Series

Axis Configuration

5-Axis

Control System

Full Servo

Suitable Applications

Material Handling, Assembly, Machining, Industrial Automation
