

Fixed Wireless Communication Antenna

This antenna is designed for communication between stop combat and command vehicles. It is mainly used in fixed wireless communication stations.

Overview

High-Performance Communication Solution

This fixed wireless communication antenna is engineered to deliver exceptional electrical performance and robust mechanical stability. Designed for versatility, it excels in maintaining reliable signal transmission and reception across a wide range of demanding environments. Its durable construction ensures consistent connectivity, making it an ideal choice for professional communication infrastructure requirements.

Technical Features

Key Performance Indicators

1 High Signal Reliability	1 High Environmental Adaptability
-------------------------------------	---

Design Structure

Multi-element system with central vertical mast

Environmental Durability

Mechanical Build

High Stability • Cable-Supported • Weather Resistant

Operational Environment

Harsh Conditions, Outdoor, Fixed Installation
