

Flameproof AC Motor for Mining Machinery

This flameproof AC motor is specifically designed for scraper bucket rock machines. The motor offers robust construction, reliable performance, and flameproof protection, ensuring safe operation in hazardous environments.

Product Overview

Industrial Flameproof Performance

The YBB series flameproof three-phase asynchronous motor is engineered for high-demand applications such as scraper bucket rock machines. Designed for safety in hazardous environments, it combines robust construction with high-efficiency output and optimized thermal management. This unit is built to provide reliable, consistent performance in demanding mining and industrial settings.

Technical Specifications

Protection

Flameproof

Motor Type

Three-phase asynchronous motor

Suitable Applications

Mining, Construction, Scraper bucket machines, Hazardous environments

Performance Features

Design Advantages

- High-efficiency design
- Optimized cooling system
- Robust construction
- Durable components for extended service life
