

Flanged Ball Valve for Fluid Control

This industrial ball valve is designed for fluid control. It features flanged connections for secure installation and a lever handle for manual operation.

Overview

Industrial Fluid Control

This industrial ball valve is engineered for demanding fluid control applications, ensuring reliable performance in complex processes. Featuring a robust construction with secure flanged connections, it is designed for durability and ease of installation. The integrated lever handle allows for precise, quick manual operation, making it an ideal choice for diverse industrial environments.

Technical Specifications

Nominal Diameter	200 DN
Pressure Rating	100 PN

Key Features

Application Suitability

- Industrial fluid control
- Process flow management
- Quick shut-off applications

Design Features	Flanged Connection, Manual Operation, Lever Handle, Robust Construction
