

Flanged Ball Valve with Actuator

This ball valve is designed for industrial applications requiring precise flow control. It features a robust construction with a flanged connection for secure installation and is equipped with an actuator for automated operation, allowing for remote control and monitoring.

Product Overview

Industrial Flanged Ball Valve with Actuator

This industrial-grade ball valve is engineered for applications requiring precise and reliable flow control. It features a robust, durable construction with a standard flanged connection, ensuring secure installation in demanding environments. Equipped with an integrated actuator, this valve supports automated operation, enabling seamless remote control and real-time process monitoring.

Technical Specifications

Connection Type	Flanged
Operation Method	Automated (Actuator)
Application Suitability	Industrial Processing, Automated Flow Control, Remote Monitoring

Key Features

Performance Highlights

- Robust construction for durability
- Precise flow regulation
- Remote control capability
- Secure flanged installation
