

Flanged Ball Valve with Short Face-to-Face

This ball valve features flange connections for secure installation. It is engineered with a short face-to-face standard to fit within compact spaces while ensuring a tight seal.

Product Overview

Industrial Wafer Ball Valve

This flanged ball valve is designed with a short face-to-face dimension, making it an ideal choice for space-constrained industrial piping systems. Engineered for manual operation, the unit provides reliable flow control and effective sealing. Available in stainless steel and WCB configurations, it is well-suited for a variety of demanding fluid handling applications.
