

Flanged Immersion Heating Element

Immersion heating element with a square flange for mounting. The element consists of three U-shaped tubular heating rods connected to a flange with terminal connections.

Overview

High-Efficiency Flanged Immersion Heating

This flanged immersion heating element is engineered for reliable and efficient liquid heating applications in tanks and industrial vessels. Featuring a robust square flange mounting system, it ensures secure installation and optimal heat transfer. The design utilizes three U-shaped tubular heating rods, providing consistent thermal performance and precise temperature control for demanding industrial environments.

Technical Specifications

Mounting Style	Square Flange
Heating Element Configuration	Three U-shaped tubular rods
Primary Application	Liquid Heating, Tanks, Vessels
