

Flanged Industrial Angle Valve with Handwheel

This industrial angle valve features flanged connections for secure installation. It is equipped with a handwheel operator that allows for manual flow control in fluid handling systems.

Overview

Industrial Marine Angle Valve

This flanged industrial angle valve is engineered for reliable flow control in demanding marine pipeline environments. Featuring a durable manual handwheel operator, it provides precise opening and closing capabilities. Available in robust materials like cast steel and stainless steel, it is designed to withstand the rigors of shipboard fluid handling systems.

Technical Specifications

Diameter Range

50 A

Minimum Diameter

125 A

Maximum Diameter

Material Options

Cast Steel, Stainless Steel

Connection Type

Flanged

Operation Method

Manual Handwheel

Application

Industry Suitability

Marine • Industrial • Fluid Handling

Primary Application

Ship pipelines
