

Flanged Industrial Ball Valve with Actuator

This industrial ball valve features a flanged connection for secure integration into piping systems. It is equipped with an actuator for automated operation, providing precise control and remote adjustment of the valve position.

Overview

Industrial Automation Ready

This flanged industrial ball valve is engineered for demanding fluid control environments, featuring a robust construction suitable for chemical processing, oil and gas, and water treatment applications. The integrated actuator enables seamless automated operation, allowing for precise flow control and remote position adjustment. Its flanged connection design ensures secure, leak-resistant integration into complex piping systems, making it a reliable choice for critical industrial infrastructure.

Technical Specifications

Operation

Automated • Actuated

Valve Type

Industrial Ball Valve

Connection Style

Flanged

Application Areas

Suitable Industries

Chemical Processing, Oil & Gas, Water Treatment
