

Flanged Pressure Regulating Valve with Gauge

This pressure regulating valve is constructed from corrosion-resistant material and features a flanged connection for easy installation. The valve is equipped with a pressure gauge to monitor internal pressure, making it suitable for high-pressure or critical applications.

Overview

High-Performance Pressure Regulation

This flanged pressure regulating valve is engineered for critical industrial applications requiring precise pressure control. Constructed from corrosion-resistant materials, it offers exceptional durability for demanding environments such as chemical processing, oil and gas, and water treatment facilities. The integrated pressure gauge allows for real-time monitoring, ensuring operational safety and efficiency in high-pressure systems.

Technical Specifications

Connection Type	Flanged
Monitoring	Integrated Pressure Gauge
Material Construction	Stainless Steel

Application Suitability

Recommended Industries

- Chemical Processing
- Oil and Gas
- Water Treatment
