

Flat Non-Sheathed Electrical Cord

This flat non-sheathed cord is used as wiring for indoor appliances, small electric instruments, and meters. It is also suitable for broadcasting lighting and similar applications.

Product Overview

Flat Non-Sheathed Electrical Cord

This flat non-sheathed electrical cord features high-quality stranded plain copper conductors for reliable electrical conductivity. The PVC insulation ensures effective protection against environmental factors and electrical shock during indoor operation. Designed with a convenient flat configuration, this cable is ideal for integration into lighting fixtures, various appliances, and electronic devices where space-saving installation is required.

Technical Specifications

Max Conductor Temperature

70

Maximum Operating Temperature

Rated Voltage (Uo/U)

300/300V

Construction

Conductor Material	Plain copper wire strands
Insulation Material	PVC (Polyvinyl Chloride)
Cable Type	Flat, Non-Sheathed, Parallel
